Working Papers

The her in inheritance: marriage and mobility in Quebec 1800–1970 (Job Market Paper)

When did spouses begin to strongly match on economic ability? Many believe it is a modern development, a consequence of rising female employment and education levels. Using a large new dataset from Quebec, I find that marriage in Quebec was highly assortative as far back as the early 19th century. Moreover, assortment was not merely matching between similar families, but instead depended on the human capital of both men and women as individuals. Finally, I show that the abilities of women mattered as much as that of their husbands for the outcomes of their children. Strongly assortative marriage had always been important because the human capital of women mattered as much as that of men for marriage and mobility.

Before the fall: Child quantity and quality in pre-demographic transition Quebec 1620–1850

While it plays a key role in theories of the transition to modern economic growth, there are few estimates of the quantity-quality trade-off from before the demographic transition. Using a uniquely suitable new dataset of vital records, I use two instrumental variables — twin births and aggregate infant mortality shocks — to estimate the trade-off in Quebec between 1620 and 1850. I find strong evidence of a trade-off between family size and child literacy, albeit a relatively modest one.

Works in Progress

Commodities' Production Function and Human Capital: Evidence from Puerto Rico with Mateo Uribe-Castro

Was There A Crisis? Living Standards in Lower Canada, 1775 to 1850 with Vincent Geloso

Treating the filles like a roi? Gender differences in child mortality Quebec 1620–1850.
